

Prof. Andrew Jorgenson

(Bostono koledžas, JAV)

paskaita

„Development, Inequality,
and Governance: Factors
Influencing Sustainability in
Regional and Global
Contexts“.

KADA: gegužės 18 d. (4dienis) 11 val.

KUR: VU Filosofijos fakulteto 201 aud.

Paskaitos anotacija:

In this talk I begin with a summary of my collaborative research on the effects of economic development and income inequality on carbon emissions, and how these relationships change through time. Next, I provide an introduction to the emerging area of sustainability research on the carbon intensity of human well-being, where we assess the extent to which development and inequality partially shape such socioenvironmental relationships. I provide examples of these two areas of research that focus on global samples of nations as well as studies that focus explicitly on nations in Central and Eastern Europe. I conclude by describing recent preliminary research where we investigate how forms of regional governance and macroeconomic integration influence the emissions of fossil-fuel power plants in nations throughout Central and Eastern Europe.

Apie lektorių:

Prof. Andrew Jorgenson is the incoming chair of the department of Sociology at Boston College (USA) as well as the current Chair of the Section on Environment and Technology of the American Sociological Association (ASA). He is the editor of the journal Sociology of Development as well as director of graduate studies in sociology at Boston College and a lead member of the ASA task force on climate change and society.
